Please replace the paragraph beginning on page 4, line 17, with the following rewritten paragraph:

--Signal construction, detection and estimation techniques suitable for use in conjunction with the present invention are described in the above-cited U.S. Patent Application Serial No. 09/503,041.--

IN THE CLAIMS

26. (Amended) An apparatus for uplink communication between a mobile station and a base station of a wireless communication system, the apparatus comprising:

means for generating at least one of an uplink access signal and an uplink timing synchronization signal; and

means for transmitting the generated at least one signal from the mobile station to the base station in a particular one of a set of recurring intervals in which regular uplink data transmission from at least one additional mobile station to the base station is at least partially suspended.

29. (Amended) An apparatus for uplink communication between a mobile station and a base station of a wireless communication system, the apparatus comprising:

means for receiving in the base station at least one of an uplink access signal and an uplink timing synchronization signal transmitted from the mobile station in a particular one of a set of recurring intervals in which regular uplink data transmission from at least one additional mobile station to the base station is at least partially suspended; and

means for processing the received at least one signal.
